Experience

Synnefa - FarmCloud | AgriTech, Nairobi

Sole Product Designer

Dec 2023 - Mar 2026

- Designed FarmCloud V2.0 as a multi-actor platform for farmers, buyers, and three distinct admin teams, each with role-appropriate dashboards built around actual workflows.
- Structured the entire platform around the crop lifecycle: a connected data hierarchy linking activities, inputs, environmental conditions, and financial outcomes across eight growth stages.
- Rebuilt onboarding after field research showed only 2 of 20 farmers could complete it independently. Introduced mobile number sign-up, progressive disclosure, and a post-onboarding product tour. Success rate: 10% to 70%.
- Pushed back on a directive to mirror the full platform in USSD. Reframed scope around three high-value data types within hard telecom constraints, validated with 5 farmers before rollout.
- Originated the Market Linkage feature from zero: farm shadowing and 10 buyer interviews revealed a shared broker problem that no existing tool addressed.

SoulShape | HealthTech

Product Designer (Independent Project)

April 2026

- Investigated why coordinated weight-loss care fails structurally and designed a digital care coordination system in response. Prototype complete; currently seeking a clinical or operational pilot partner.
- Built the evidence base from peer-reviewed operations management literature, Kenya's national primary health care policy framework, and clinical obesity research.
- Designed a Signal Layer: structured artifacts carrying what changed, why it matters, and what needs attention across domain boundaries, without exposing raw clinical data.
- Built role-based access and consent architecture aligned with the Kenya Digital Health Act 2023 and its April 2025 implementing regulations.

Brrng | Kenyan Startup

Backend Developer Intern

Mar 2022 - May 2022

- Early exposure to engineering workflows, system architecture, and technical debugging alongside a lead backend developer.
- Built a working model of how engineers think that continues to shape how I collaborate, scope, and push back with evidence.

Key Achievements

10% to 70%

Self-Onboarding Rate

Rebuilt onboarding after a 20-farmer usability test showed 18 could not complete the flow independently.

USSD System

Built for Non-Smartphone Users

Reframed scope around three actionable data types within hard telecom constraints, validated with 5 farmers before rollout.

6 / 7 Farms

Active Platform Adoption

Confirmed in a 7-farm shadowing study. The exception was a remote farm delegating platform use to a manager.

Market Linkage

Feature Originated from Zero

Conceived and validated through farm shadowing and 10 buyer interviews. The feature did not exist before this research.

\$177K

Additional Farmer Investment Unlocked

Across a GSMA-funded pilot: 5,000+ farmers across 14 African countries, 4,000 active users digitising records.

34% / 61%

Crop Failure Reduction / Technique Adoption

Reduction in crop failure on farms with consistent platform use. 61% adopted new farming techniques via advisory features.

Education

Certifications

- A Complete Guide to UX Design - Alison
- Agile Scrum Master Certification - Udemy
- User Research Step by Step - Udemy
- User Experience - Future Learn

Skills

Tools

- Figma, Figma Make, ProtoPie, FigJam, Notion, ClickUp, Canva, ZenHub

Design

- End-to-end product design, workflow engineering, interaction design, information architecture, USSD interface design

Research

- Usability testing, in-depth interviews, field research, farm shadowing, competitive audit, feedback synthesis
